

WISH (Wonderful Interactive SHell) - User Manual

NAME

wish - Wonderful Interactive SHell.

SYNOPSIS

wish [command] [arguments]

DESCRIPTION

wish is a basic shell with two built-in commands (**exit** and **cd**) and standard job management commands. It supports one foreground job and one background job.

The shell uses the readline library for interactive input, if available on the machine.

FEATURES

Built-in Commands:

cd: Changes the current directory.

exit: Exits the shell.

Job Management:

Commands can be executed in the foreground or background (using **&**).

The shell handles signals like SIGINT to interrupt foreground jobs.

USAGE

Run a command in the foreground: **command**.

Run a command in the background: **command &**.

Interrupt a foreground command: **Ctrl + C**.

INSTALLATION AND COMPILATION

Use the provided Makefile to compile **wish**. The Makefile automatically adjusts the compilation based on the availability of the readline library.

COMPATIBILITY

Works on Linux. Compatibility with MacOSX is not guaranteed.

COPYRIGHT
